

Real-Time Proactive Video Security with CHEKT

CHeKT Visual Security is a video alarm system and cloud-based security platform that communicates instant video alarm notifications to you and when needed a video monitoring center.

An effective security solution alerts the right people at the right time and gives them control to act on critical information. The CHeKT Visual Security leverages the power of Video AI detection with simplicity of a mobile app. CHeKT's mobile app and proactive communication cloud, turns cameras into video-centric security zones. Gone are the days of the blind traditional alarm system or a VMS system where you struggle to manage alarm and video alarm activations.

With the CHeKT Video Control Panel, and AI cameras, each camera becomes an video detection zone to cover critical areas around your property, inside and out. When object classification detects a person or vehicle, your CHeKT Video Control Panel instantly puts you in control of the situation.

A proactive video security system is the most effective way to secure your property from theft and vandalism, and the power to control this simple video alarm system is in the palm of your hand.

KEY FEATURES

- Arming and scheduling control for your visual security system
- Automated and live audio broadcasts for active deterrent and on-site announcements
- Highly accurate video AI detection from CHeKT Cameras & supported 3rd party cameras.
- Cloud recording of all critical event detection (30/90/365 day storage options)
- Proactive video response in the CHeKT mobile app and your video monitoring center
- Real-time video awareness to ensure an expedited emergency response

HOW DOES THE TECHNOLOGY WORK?

Accurate Detection

By utilizing the Video AI object detection in cameras, you can rest assured that you and your video monitoring center can respond when a critical incident is detected.

The CHeKT Video Control Panel

CHeKT's onsite video control panel is the heart of your onsite video security system. CHeKT's control panel encrypts video access, the alarm communication protocol and integrates Video AI detection from cameras, speakers, lighting, and more.

Multi-Site/User Control

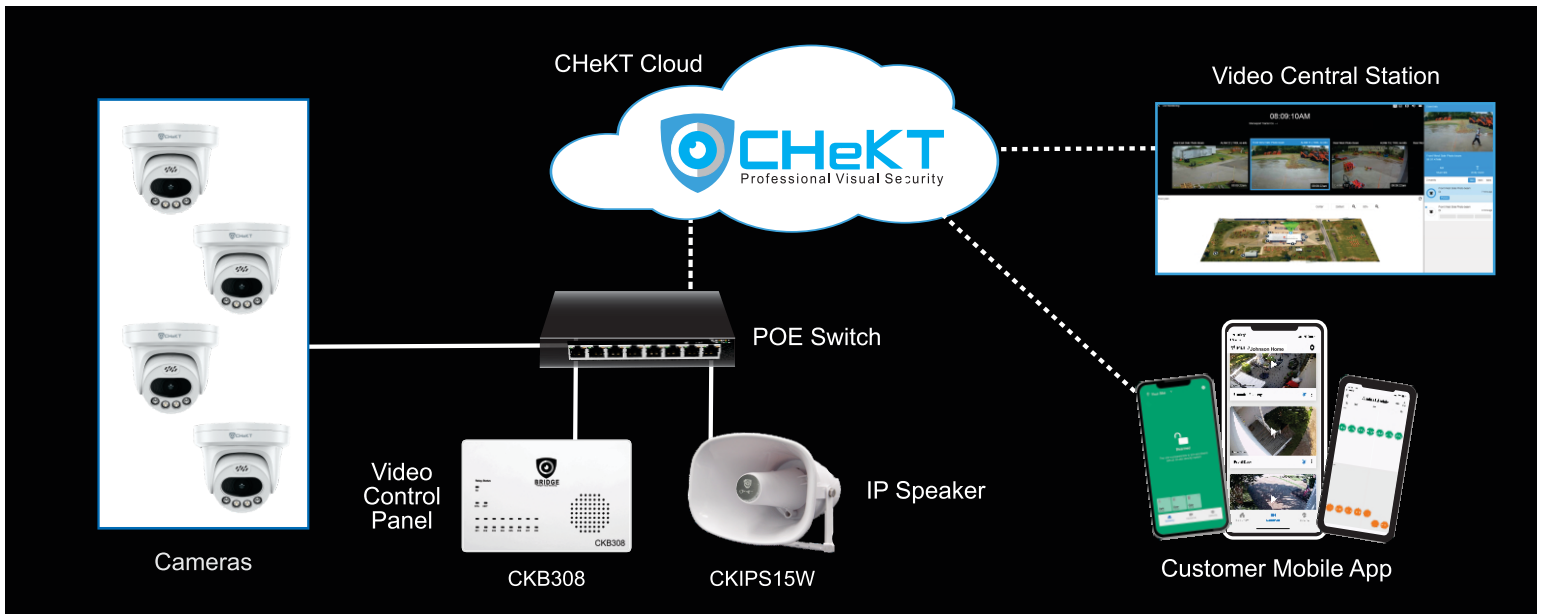

CHeKT gives you the confidence and control of multiple sites and managing user access in a single app, allowing your team to see and respond to critical incidents detected by your video security system.

Remote Control

Using CHeKT's mobile app, you control video AI detection by arming and disarming your site. The app also provides push notifications on video detection, live video streaming, access to cloud-stored video events, and control of audio services*, all from the palm of your hand.

*Live Audio and site broadcasts require cameras with a microphone and onsite speakers.

Video AI Detection & Video Alarm Communication

VIDEO CENTRAL STATION

Once your system is installed, your CHeKT Visual Security solutions integrator will work with you to determine if a certified video central station needs to monitor your site. Sites monitored by a video central station simultaneously communicate alerts to the video command center and the CHeKT mobile app.

SELF-SERVICE SYSTEM

A CHeKT Visual Security system can also be self-monitored by you and your team. Add multiple users to your sites and self-monitor your video alarm system. Receive instant push notifications of video AI detection, view cameras live, issue live audio warnings, and control sirens and lights, all from the CHeKT mobile app.

THE CHEKT ADVANTAGE

Simple. Powerful. Effective.

Visual Alarm Detection

CHeKT gives you and your video monitoring agents precise real-time video alerts. When a Video AI alarm occurs, CHeKT brings you visual situational awareness.

Deterrence & Asset Protection

Extend your security perimeter away from your building and protect exterior assets. Proactive Video Monitoring reduces the possibility of vandalism or intrusion.

Remote Command & Control

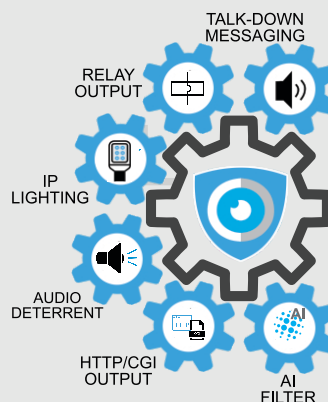

Using automated audio broadcasts, live audio broadcasts, and remote lighting control, you have the power to deter crime. CHeKT puts you in control of any critical event.

Video Alarm Monitoring

Integration with the CHeKT Video Control panel turns Video AI cameras into alarm zones for communication into the following alarm software platforms.

Automation Rules

CHeKT's Automation Rules allow security companies to utilize camera analytics to create a proactive alarm response. CHeKT will automatically initiate audible and visual responses using IP Speakers and relays when an alarm occurs from any of these systems.

Video Storage Vault

CHeKT is turning every camera into a secure cloud camera with cloud storage and with our new VMS Video Vault, access to continuous recording. All easily accessible for your customers from our mobile app and computer browser UI.
